Abstract We report on the publication of a new catalogue which contains up-to-date information on X-ray binaries, which are semi-detached binary stars in which matter is transferred from a usually normal star to a neutron star or to a black hole. The aim of this catalogue is to provide scientists with basic information on X-ray sources and their counterparts in other wavelength ranges in order to facilitate further investigation of these objects.

Information About New Books on Highly Evolved Close Binary Stars (Abstract)

A. M. Cherepashchuk

N. A. Katysheva
